Vumii Named Finalist in 2008 American Security Challenge

ATLANTA, May 22, 2008 - Vumii, a developer of highly engineered yet easy to use long-range, day/night surveillance camera systems, announced it was selected as a finalist for the 2008 American Security Challenge. The company is among six finalists presenting on June 5 at the Homeland Security Science & Technology Stakeholders Conference East in Washington, D.C. Vumii will discuss how its innovative security solutions are addressing a critical need in the global commercial and governmental outdoor perimeter and border security market. Vumii will present before an impressive panel of judges including venture capitalists, leading security contractors and integrators, security experts from the federal government, and critical infrastructure operators, who use the American Security Challenge to identify and evaluate emerging leaders in the security industry. These judges reviewed more than 100 applications from around the world. A variety of criteria were considered in selecting the six finalists including the applicability of a company's technology to national security, uniqueness of the innovation and viability of the business in regard to its management team. The company's capitalization and marketing plans were also examined.

"We're honored to be among a select few under final consideration for this high-profile honor," said Randall Foster, CEO and co-founder, Vumii. "The American Security Challenge is an unprecedented chance to demonstrate how our company is addressing one of the most important topics of our generation - the security of our nation."

Vumii's innovative long-range, night surveillance cameras and software represent a revolution in night vision capabilities. Providing natural contrasts, high magnification, and situational awareness in complete darkness, Vumii's technology empowers security personnel monitoring commercial industrial sites, transportation infrastructure government and military sites, and national borders.

About the Security Challenge

The objective of the American Security Challenge is to increase the visibility of innovative technology and help the commercialization process so that pioneering technology can reach the marketplace faster to protect our citizens and critical assets. The Challenge takes place in conjunction with the 2008 Homeland Security S&T Stakeholders Conference East, presented by the National Defense Industrial Association (NDIA). National security technologies included in the challenge include those related to energy, information management, life sciences, cyber security, data collection and storage and facility security.

About Vumii

Vumii delivers advanced night vision surveillance and graphical user control systems which enable users to prevent and rapidly respond to terrorism, theft, vandalism, asset damage and other physical security threats. Vumii leverages advanced electro-optics and image processing expertise to create high performance, versatile, visualization hardware and software technologies for the defense and physical security markets. Vumii solutions are affordable and easily integrate with existing security architectures. Founded in 2004, Vumii is a privately-held company headquartered in Atlanta, Ga.
